

Gaurav Sharma

Software Engineer — JVM & .NET Backend, Distributed Systems, Full-Stack

gaurav.029.sharma@gmail.com · +91 8755594721 · Hyderabad, India · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Full-stack Software Engineer with 5+ years spanning backend services, APIs and user-facing applications — Java, Kotlin, Spring Boot and .NET on the server; React.js, Angular and Node.js on the client. Comfortable owning a feature end to end, from data model and API design through to a responsive, performant UI.

EXPERIENCE

Software Engineer, Saras Analytics

Nov 2022 – Present · Hyderabad, India

- Designed and developed scalable backend services and reusable integration components using Java, Kotlin, Spring Boot, Kafka, GCP, PostgreSQL, MongoDB, Docker and Kubernetes.
- Built and operated event-driven microservices on Kafka, using asynchronous messaging to decouple ingestion from processing so pipelines degrade gracefully instead of cascading under load.
- Optimised PostgreSQL and MongoDB queries, reducing average API response time by 40% and improving overall application performance.
- Resolved 50+ critical production issues, helping maintain 99.5% uptime for a platform serving 10,000+ daily active users.
- Automated the connector integration workflow, reducing implementation time from 30 days to 2 days (93% faster) and enabling significantly faster client onboarding.
- Shipped an autonomous AI agent (LangGraph, MCP, Claude) that detects, diagnoses and remediates production issues without human intervention, cutting bug resolution from 15–20 days to hours.
- Containerised services with Docker and deployed them on Kubernetes on GCP, owning each service through to production rather than handing it over at merge.

Software Developer, Mystify Consulting

Sep 2021 – Nov 2022 · Bangalore, India

- Improved product performance by 3x by implementing an Akka Actor Model architecture in .NET, enabling far more effective concurrent processing.
- Used Confluent Kafka for asynchronous processing between services in a high-volume airfare distribution platform.
- Diagnosed and resolved a critical production issue responsible for approximately \$10K/month in revenue leakage, preventing further financial loss.
- Developed and deployed a card payment system, streamlining payment processing and improving the overall customer experience.
- Built and deployed .NET microservices on Azure with Jenkins CI/CD pipelines.

Full Stack Developer, Flipshope

May 2021 – Sep 2021 · Jaipur, India

- Built end-to-end e-commerce functionality using Node.js, React.js and REST APIs, serving 15,000+ active users.
- Reduced page load time by 50%, improving application performance, SEO and user retention.
- Implemented JWT-based authentication and data encryption to strengthen application security.

SKILLS

Languages: Java, Kotlin, C#, JavaScript, TypeScript, Go, Python, SQL

Backend & Distributed Systems: Spring Boot, Spring, .NET, Microservices, Event-Driven Architecture, REST APIs, Asynchronous Programming, Akka Actor Model, Node.js, SOAP, Object Oriented Programming

Messaging & Streaming: Apache Kafka, Confluent Kafka

Databases: PostgreSQL, MongoDB, MySQL, BigQuery, Elasticsearch

Cloud & Infrastructure: Docker, Kubernetes, GCP, Azure, CI/CD Pipelines, Jenkins, Firebase
Observability & Production: Grafana, Datadog, New Relic, Kibana, JMeter
Frontend & AI: React.js, Angular, HTML, CSS, Bootstrap, LangGraph, MCP (Model Context Protocol), Claude, LLM Integration, Intelligent Agents

EDUCATION

Bachelor of Technology, Electronics and Communication Engineering, National Institute of Technology, Uttarakhand	2017 – 2021
XII Standard (PCM), Physics, Chemistry, Mathematics, Rishi Galav Public School	2015 – 2016
